VEHICLE SERVICE REQUEST MANAGEMENT SYSTEM

Name	Suhritha
Roll Number	241401110
Department	Computer Science and Business Systems (CSBS)

ZOHO CREATOR • WORKFLOWS • DELUGE SCRIPTING

1. Aim

Toautomate the vehicle service request process by sending an acknowledgement email automatically when a customer successfully submits the Service Request Form, using a Zoho

Creator workflow and Deluge script.

This automation removes the need for service-centre staff to send acknowledgement emails manuallyandensuresthat every valid service request receives an immediate confirmation.

2. Procedure

Step 1 — Create a Workflow

Create a new workflow for the Service_Request_Form from the Workflow section of the Zoho Creator application.

Step 2 — Configure the Trigger

Set Record Event to ***Created*** and Form Event to

Successful form submission , so the workflow runs after a valid submission.

Step 3 — Name the Workflow

Name the workflow ***SendVehicleService Acknowledgement Email*** and save it.

Step 4 — Add a Deluge Action

Add a new action and select ***Deluge Script*** to generate a customised acknowledgement email using submitted form data.

Step 5 — Write the Deluge Script

Use a ***sendmail*** script to send the acknowledgement to the vehicle owner's email address. Include the vehicle registration number, vehicle type, service type, and preferred service date using values from the submitted form.

Step 6 — Save the Workflow

Save the script and verify that it is attached to the Successful form submission event.

Step 7 — Test the Application

Submit a sample vehicle service request through the live form using valid customer details, vehicle information, service requirements, and a preferred service date.

Step 8 — Debug and Verify

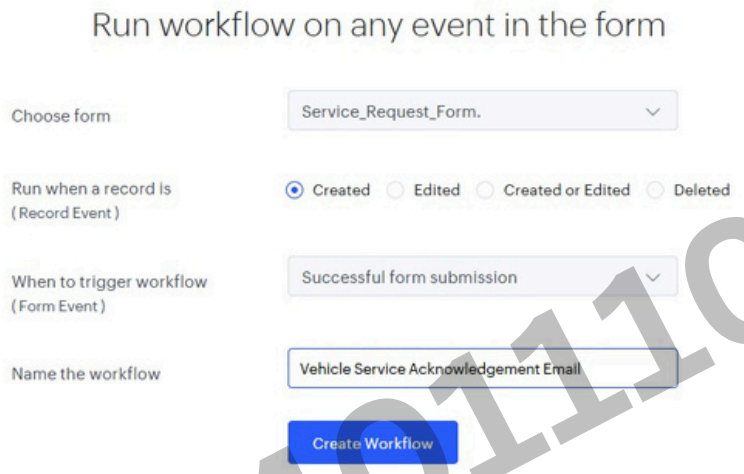

Check the submitted record in Service_Request_Report and verify the recipient's inbox. Confirm that the acknowledgement email contains the correct vehicle and service details.

4. Final Result

Aworkflow wasimplemented for the Vehicle Service Request Management application. Whenever a customer successfully submits the vehicle service request form, the workflow automatically sends a personalised acknowledgement email.

The application was tested using a live form submission. The submitted record appeared in the service request report, and the acknowledgement email was received with the correct details. Therefore, the acknowledgement process was automated using Zoho Creator Workflows and Deluge scripting.
