CREATING REPORT

241401110

CONCLUSION

The Advanced Fields experiment helped us understand how different field types can be used to collect and manage complex information efficiently.

Fields such as **Rich Text, URL, Image, Percent, Currency, Decimal, Date-Time, SubForm, Lookup, Signature, and File Upload** were successfully explored.

These fields provide greater flexibility and improve the functionality and presentation of forms.

The experiment also demonstrated how advanced fields can be combined with basic fields to create more structured and user-friendly applications.Overall, the experiment enhanced our understanding of designing **dynamic, detailed, and efficient forms in Zoho Creator**.
